

# Design Pattern

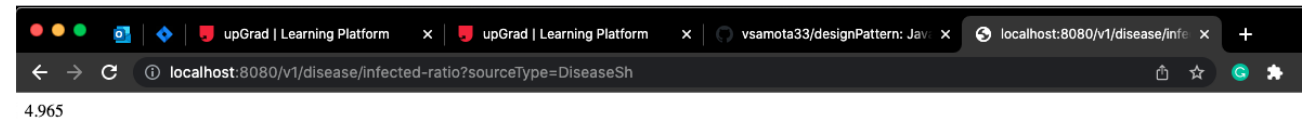

1. <http://localhost:8080/v1/disease/disease-sh-io/count>

2. <http://localhost:8080/v1/disease/john-hopkins/count>

3. <http://localhost:8080/v1/disease/infected-ratio?sourceType=DiseaseSh>

## NOTE:

I have changes config urls

### **From**

diseaseSh-io-url: <https://corona.lmao.ninja/v2/countries/India>  
john-hopkins-url: <https://corona.lmao.ninja/v2/jhucsse>

### **To**

diseaseSh-io-url: <https://disease.sh/v3/covid-19/countries/India>  
john-hopkins-url: <https://disease.sh/v3/covid-19/jhucsse>

Because, given URL are not working and giving 502, may be they are old or belong to specific region
